The best way to stay informed of new releases is to subscribe via the Github repository. It's a bit geeky but it works well. Start by going to the Github repo here:

https://github.com/bartificer/taming-the-terminal

Note that the definition of "*release*" isn't just when a new chapter is added to the book. For example:

- A release could be a bug fix (like how we fixed the problem that links weren't easily visible in Dark Mode on iOS)
- It could be a new format (like when we released the A5 format).

Hopefully this release schedule will settle down and you'll only be seeing the new chapters, but it might be a bit chattier than you would expect.

Sign Up to GitHub

Use the green Sign up button in the middle of the header to get a free Github account. This is so Github has your email address to which to send the notifications. It also makes you a full-fledged member but no other emails will come to you.
Join GitHub today

GitHub is home to over 50 million developers working together to host and review code, manage projects, and build software together.
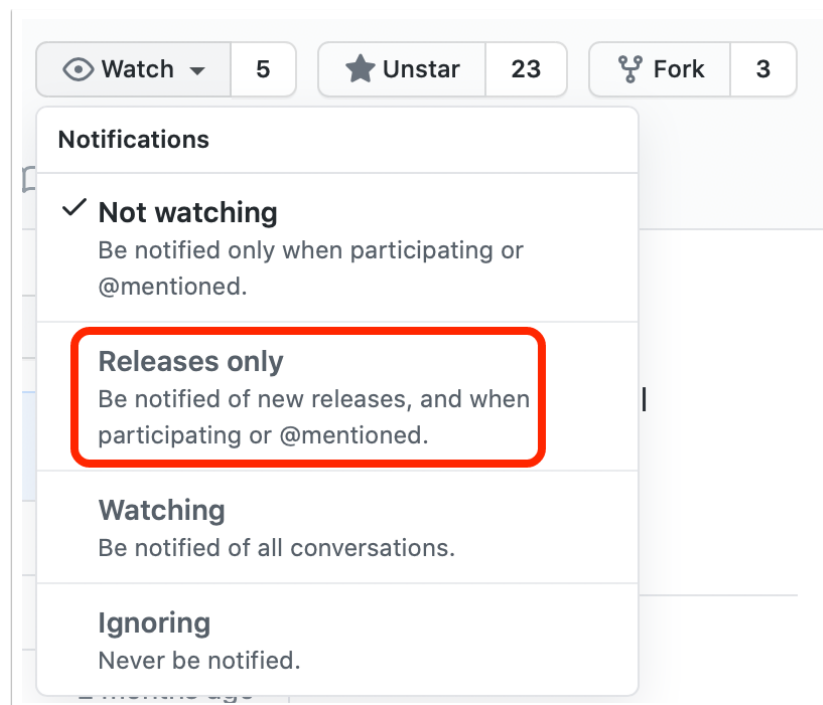

Sign up

Select Watch

In Github you can "watch" different levels of activity on a repo.

Choose Releases Only

Releases only will send you an email only when a full release happens. Full releases include new chapters to the book, as well as bug fixes. For example, dark mode wasn't showing links very well, so a new release went out to fix it.

Watch Button Changes

Your Watch button for Taming the Terminal should change to say "Unwatch releases".

When a New Release Comes Out

When you get a notification of a new release, follow the link back to the Github repo. On the right side of the page you'll see Releases. Select it to see the different versions.

Choose the Version You Want

Now you can download the latest version of the book. If you need guidance on figuring out which version is right for you, please refer to https://podfeet.com/tttbook for a full description.
